Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was plotted against the number of trials for each condition. The number of correct responses increased with the number of trials for all conditions. The number of correct responses was highest for the condition with the highest number of trials (10 trials) and lowest for the condition with the lowest number of trials (2 trials).

Sequence logo for the 5' region of the 18S rRNA gene. The y-axis represents information content in bits, ranging from 0.00 to 0.25. The x-axis shows nucleotide positions from 1 to 100. The logo shows a strong consensus for 'GAGG' at positions 1-4, followed by a highly variable region with a peak at position 50.
